GPRS FUEL-OIL ALARM

THE CSS GPRS FUEL-OIL TANK ALARM REPRESENTS A STEP CHANGE IN SECURING FUEL-OIL TANKS IN DOMESTIC, COMMERCIAL AND INDUSTRIAL LOCATIONS.

We have combined the UK's leading fuel-oil tank sensor system from Watchman with our industry leading GPRS signalling and monitoring technology to produce a fully monitored alarm system to prevent theft of fuel-oil.

The fully monitored system provides not only a call from a trained staff member at the designated ARC (Alarm Receiving Centre) but also provides a password protected real-time online log detailing all status messages and activation alerts that the user can access at any time.

Clients can view up to 25 individual Tank Alarms via the online log (expandable). This provides detailed information of each individual tanks oil usage over time. Additionally the system can email any number of email addresses with the oil usage details of individual tanks as well as emailing the oil supplier when levels reach the reorder mark if required.

The GPRS Tank Alarm comprises two units. One unit (Tank Sensor) is easily fitted to the top of the tank and the other unit (GPRS control unit) can be located in the nearest available building (within 200 meters) with a power supply. Alternatively power can be supplied via a 12v mobility battery. Multiple tank sensor units can be linked to one GPRS controller proving they are within the specified range along with our range of specialist dual optic wireless PIR's providing a confirmed alarm if a confirmation is required.

FEATURES

- Police SBD (Secured by Design) Approved
- ARC monitored system
- GPRS communication
- Password protected online log
- ATEX Certified
- Low voltage
- 200 meter range
- Suitable for metal and plastic tanks
- Suitable for tanks up to 3m in height
- Quick and easy DIY installation
- Accurate to 1.5 cm oil level
- External wireless sounder (Optional)
- External wireless high security iButton remote arm/disarm module (optional). This allows a coded iButton key to be given to the fuel supplier so they can disarm the system when adding fuel. System can be programmed to re-arm automatically after a specified time if supplier forgets to re-arm. Online log also provides a record of the time of fuelling and the key used and email both the customer and the supplier with this information automatically.

BENEFITS

- Police SBD Approved
- Notification of fuel tank tampering anywhere in the world
- Peace of mind
- Cheaper than replacing one average tank full of fuel oil.
- Can be wired to a standard security bell box

MONITORING COSTS

The GPRS Tank Alarm is a fully monitored security system. All activations are sent directly to a designated ARC.

This item requires a monitoring contract that includes the cost of all messages, calls, etc.

Further details can be found on our website at www.compoundsecurity.co.uk
